1 Procedure Purpose

2 Safety Information

1. SYBR Gold has no data available addressing the mutagenicity or toxicity of SYBR® Gold nucleic acid gel stain. Because this reagent binds to nucleic acids, it should be treated as a potential mutagen and handled with appropriate care. The DMSO stock solution should be handled with particular caution as DMSO is known to facilitate the entry of organic molecules into tissues.[1]

3 Materials

• AD Template

4 Dilutions

1. Dilute the AD template such that its final concentration in the PCR reaction will be $1 \text{ng}/\mu \text{L}$.

5 Procedure

1. Mix the following reagents in either a PCR tube or a 96-well plate such that the final concentrations match the following:

6 Analysis
